***We've got you covered!***

Our wattles & logs are used by State Departments of Transportation, the Federal Highway Administration, local municipalities and on many private developments such as ski resorts, golf courses, mines, new subdivisions and commercial construction sites. Wattles & logs are an accepted Best Management Practice (BMP) for stormwater pollution prevention. Our products are offered in both certified noxious weed free straw and aspen excelsior.

When installed wattles or logs: protect storm drain inlets, prevent sediment laden run-off from construction sites, are used as check dams in drainage channels & swales and reduce slope length on hillsides.

Wattles and logs are a more efficient, cost effective and friendly alternative to hay bales, silt fence and other synthetic products while offering outstanding performance.

- **Prevent Sediment Laden Runoff**
- **Reduce Slope Length**
- **Used As Check Dams**
- **Promotes Vegetation**
- **Does Not Impede Wildlife Pathways**
- **East to Install**
- **Cost Effective**
